

PLANTATION PROGRAMME IN OUR COLLEGE CAMPUS

The students of M.Sc. Zoology and Aquaculture organized a Plantation Programme in our college campus with the objective of promoting environmental awareness and encouraging greenery conservation. The programme highlighted the importance of trees in maintaining ecological balance, improving air quality, and creating a healthy environment.

During the programme, students planted various saplings in different areas of the campus including gardens, pathways, and open spaces. Faculty members and students actively participated in the activity and emphasized the need to protect and nurture plants for a sustainable future. The participants also discussed the role of afforestation in controlling pollution and conserving biodiversity.

The programme created awareness among students about environmental responsibility and inspired them to contribute towards a greener and cleaner campus. The enthusiastic participation of the students reflected their commitment to environmental protection and sustainable development.
